Synthetic sample report

Vulnerability assessment report

Customer portal review

Snapshot RPT-e0314266 · 04 Nov, 18:50 UTC

Analyst: Long. Assessment: AST-001, created 02 Nov, 02:02 UTC.

This frozen preview contains synthetic fixtures and any explicitly labelled preview attachments. No scanner, model, or backend produced this document. It is not a client-ready assessment.

7.1 Executive summary

The recorded scope covers web.lab.example (192.0.2.30/32) on TCP ports 80, 443. This snapshot contains 4 finding(s), including 2 suspected finding(s). Confirmation labels describe the synthetic observation; they do not establish live validation.

Priority follows source severity in the order Critical, High, Medium, Low. CVSS and contextual risk scores are unknown. No numerical risk score is calculated.

7.2 Scope and methodology

Assessment request	Review exposed services and common web configuration issues on the registered customer portal.
Recorded permission	LAB-PERM-0042
Target / IPv4	web.lab.example / 192.0.2.30/32
Allowed TCP ports	80, 443
Rate / deadline	2 req/s / 120 s per action
Exclusions	No other hosts or ports. No denial-of-service checks.

Method: inspect labelled fixture observations, retain each source membership, separate observations from inference, and record analyst disposition. A permission reference is recorded context and does not verify authorization. Preview attachments are stored in memory as attachments; they are not parsed or executed.

Step / tool	Method / state	Rationale
A1: Service discovery on allowed ports Nmap	Discovery Done	Scope lists only ports 80 and 443. Discovery supports tool selection using observed services.
A2: Web baseline of https://web.lab.example OWASP ZAP	Baseline Done	The synthetic Nmap record contains an HTTPS web service.
A3: Recorded Nikto output Nikto	Historical import / fixture Done	Historical synthetic imported output illustrates source correlation; no tool was executed.

Step / tool	Method / state	Rationale
A4: Lab-only validation of outdated nginx 1.18.0 Metasploit	Active Declined	Version banner alone does not confirm vulnerability. Active validation is In development and cannot be approved or started.

7.3 Severity distribution

Critical: 0 High: 1 Medium: 2 Low: 1

Severity is the preserved synthetic source label, separate from confidence, validation status, and analyst disposition. CVSS score, vector, version, and source are unknown; they have not been inferred from severity.

7.4 Detailed findings and evidence

F-01: Outdated nginx 1.18.0 version banner

High | Suspected | Needs review

Asset / location	web.lab.example:443
Reference	Needs analyst lookup
Source severity	High
CVSS	Unknown score, vector, version, and source
Confidence	Medium — fixture label; confidence method not supplied and probability not calibrated
Validation status	Suspected; no live validation in this preview
Analyst disposition	Needs review

Source observation: Synthetic source records report nginx 1.18.0 in a service banner and Server headers.

Inference / potential impact: The version may require review. The vendor backport level is unknown; the banner alone does not confirm a vulnerability.

Correlation: Three synthetic source records refer to the same asset, service and version. Every source membership is retained.

Source evidence (3)

Nmap: nmap-2026-11-02-0914.xml
Provenance: Synthetic fixture. Observed: 02 Nov, 02:14 UTC. Action: A1.
SHA-256: Not supplied in synthetic source record.

443/tcp open ssl/http nginx 1.18.0

OWASP ZAP: zap-baseline-0921.json
Provenance: Synthetic fixture. Observed: 02 Nov, 02:21 UTC. Action: A2.
SHA-256: Not supplied in synthetic source record.

Server: nginx/1.18.0

Nikto: nikto-0925.txt
Provenance: Synthetic fixture. Observed: 02 Nov, 02:25 UTC. Action: A3.
SHA-256: Not supplied in synthetic source record.

+ Server: nginx/1.18.0

F-02: Missing Content-Security-Policy header

Medium | Confirmed | Needs review

Asset / location	web.lab.example:443
Reference	CWE-693
Source severity	Medium
CVSS	Unknown score, vector, version, and source
Confidence	High — fixture label; confidence method not supplied and probability not calibrated
Validation status	Confirmed; no live validation in this preview
Analyst disposition	Needs review

Source observation: The synthetic response headers from GET / contain no Content-Security-Policy.

Inference / potential impact: This can increase XSS impact if an injection point exists. None has been observed.

Source evidence (1)

OWASP ZAP: zap-baseline-0921.json
Provenance: Synthetic fixture. Observed: 02 Nov, 02:21 UTC. Action: A2.
SHA-256: Not supplied in synthetic source record.

Missing Content-Security-Policy header

F-03: Directory listing on /backup/

Medium | Suspected | Needs review

Asset / location	web.lab.example:443
Reference	CWE-548
Source severity	Medium
CVSS	Unknown score, vector, version, and source
Confidence	Medium — fixture label; confidence method not supplied and probability not calibrated
Validation status	Suspected; no live validation in this preview
Analyst disposition	Needs review

Source observation: Synthetic recorded Nikto output lists directory indexing on /backup/.

Inference / potential impact: Files may be exposed. Contents were not retrieved.

False-positive uncertainty: Nikto matches on response patterns. Check manually before reporting as confirmed.

Source evidence (1)

Nikto: nikto-0925.txt

Provenance: Synthetic fixture. Observed: 02 Nov, 02:25 UTC. Action: A3.

SHA-256: Not supplied in synthetic source record.

+ /backup/: Directory indexing found.

F-04: Session cookie without HttpOnly

Low | Confirmed | Needs review

Asset / location	web.lab.example:443
Reference	CWE-1004
Source severity	Low
CVSS	Unknown score, vector, version, and source
Confidence	High — fixture label; confidence method not supplied and probability not calibrated
Validation status	Confirmed; no live validation in this preview
Analyst disposition	Needs review

Source observation: Synthetic Set-Cookie: sid=… has Secure but no HttpOnly.

Inference / potential impact: Script access to the cookie is possible if XSS exists.

Source evidence (1)

OWASP ZAP: zap-baseline-0921.json
Provenance: Synthetic fixture. Observed: 02 Nov, 02:21 UTC. Action: A2.
SHA-256: Not supplied in synthetic source record.

Cookie 'sid' without HttpOnly flag

7.5 Impact and remediation

Finding	Potential impact / uncertainty	Remediation
F-01 High	The version may require review. The vendor backport level is unknown; the banner alone does not confirm a vulnerability.	Update nginx or confirm the vendor backport level.
F-02 Medium	This can increase XSS impact if an injection point exists. None has been observed.	Add a restrictive CSP and test with report-only first.
F-03 Medium	Files may be exposed. Contents were not retrieved.	Disable autoindex and restrict the path.
F-04 Low	Script access to the cookie is possible if XSS exists.	Set HttpOnly and SameSite on the session cookie.

7.6 Limitations and review history

Synthetic frontend preview only. Scanners, model inference, active validation, and backend PDF generation are In development. Historical fixture completion does not show execution by Reknyx. Attachments are not parsed. A sample PDF does not establish assessment readiness.

Frozen report options: suspected findings included; detailed audit trail included. 0 suspected finding(s) excluded by these snapshot settings. Later settings or assessment changes do not update this snapshot.

Pending approvals: 0. Approved but not executed: 0. Failed actions: 0. Declined actions: 1. An approval records an analyst decision; it does not authorize unsupported capabilities, execute a scanner, or confirm a finding.

A4: Lab-only validation of outdated nginx 1.18.0 — Declined
Version banner alone does not confirm vulnerability. Active validation is In development and cannot be approved or started.

Assessment approval and client release have not been established. Source completeness, real target behavior, vendor backports, and exploitability remain unverified. Sensitive production evidence should not be entered into this preview.

Frozen audit trail

Time / event	Detail
02 Nov, 02:02 UTC Assessment created	Synthetic fixture. Permission ref LAB-PERM-0042 recorded; this is not live authorization.
02 Nov, 02:14 UTC Nmap completion fixture	Synthetic historical example: two services observed. No scanner connected.
02 Nov, 02:21 UTC ZAP baseline completion fixture	Synthetic historical example: three observations.
02 Nov, 02:26 UTC Nikto output fixture	Synthetic recorded output. Not executed or parsed in this preview.
02 Nov, 02:30 UTC Active validation proposed	Synthetic pending proposal. Unsupported capability; approval and execution disabled.
04 Nov, 18:50 UTC Metasploit declined	Unsupported; synthetic report may disclose unvalidated findings. No execution occurred in this preview.
